

REACH Statement

Nässjö, Feb. 11, 2026

Subject: (EC) No. 1907/2006 (REACH) of the European Parliament and of the Council of the European Union

Laws and Executive Orders

The aim of the REACH Regulation is to ensure a high level of protection for human health and the environment when articles contain substances of very high concern (SVHCs).

Lead is a pollutant that, like many other chemicals, has been classified as an SVHC. The manufacture, distribution, and use of these SVHCs are regulated by Regulation (EC) No. 1907/2006 (REACH) of the European Parliament and of the Council of the European Union.

Statement of compliance

The aim of the REACH Regulation is to ensure a high level of protection for human health and the environment when articles contain substances of very high concern (SVHCs).

To achieve this goal, REACH restricts the use of certain substances and mixtures in the manufacture of various products. We have observed and taken these regulations into account in all affected business areas, including the recent publication of the ECHA Authorization and Candidate List, which increased the number of SVHCs from 251 to 253 (according to the Candidate List as of Feb. 11, 2026).

As a downstream user, we are only partially affected by the REACH Regulation, but we comply without exception with the part of the requirements that apply to us, including changes that may affect us and/or our deliveries.

At the same time, we would like to point out that two of the materials we use (free-cutting steel 1.0718 and copper alloy Brass) contain lead in a concentration greater than 0.1%. However, in cases where these materials are part of the respective delivery, we make use of the applicable and approved exemptions in accordance with the regulations.

After reviewing all external product information and data from our manufacturing processes, we confirm to the best of our knowledge and belief that, with the exception of two lead-containing alloys, the supplied products do not contain any other SVHCs as defined by the Regulation that have been intentionally added to our manufacturing processes or the final products above the limit of 0.1% (w/w).
